

# HPE NonStop™ Developer

## Company

ETI-NET is the worldwide leader in managing critical data for industries that never stop. We develop software which allows HPE NonStop™ servers to access modern technologies. Now in our third decade of operation, ETI-NET is renowned for delivering leading-edge components to major data centres globally.

Today, ETI-NET is driving new initiatives to further extend its reach in the HPE NonStop™ space by doubling down on its primary HPE NonStop™ products.

We're expanding our team to expedite growth plans and are looking for an experienced HPE NonStop™ Developer to join our ranks.

The job will be remote (e.g., home-based) so we can be extremely flexible on location.

## Role

Your role is to work on the HPE NonStop™ (formerly Tandem) Systems as a Developer, designing and developing new functionality to the ETI-NET product set in C, TAL and COBOL, as well as maintaining our existing code and providing product support.

## Requirements

- Development experience on HPE NonStop™ mainframes.
- Development of unit and integration test specifications to ensure that software items are thoroughly tested.
- Software testing to ensure software is fit for purpose.
- Documentation of software product features. Providing technical authors with information for inclusion in software manuals and online help.
- Ability to work effectively in a team environment.
- Outstanding verbal and written communication skills to technical and non-technical audiences.
- Aptitude and communication skills to attend meetings to represent the company, e.g., to discuss the detailed design and other technical issues.
- Excellent analytical, decision-making, problem-solving, team and time management skills.
- Ability to estimate work effort for project sub-plans or small projects and ensure the project is successfully completed.
- Positive outlook, strong work ethic, and responsive to internal and external clients and contacts.

## About you

You should possess most of the following attributes and have the capacity to acquire the remainder on the job.

- TAL, pTAL, COBOL85, SCOBOL, TAOL, C.
- Guardian, EMS, DDL, Encibe, FUP, TEDIT, TS/MP (Pathway), Inspect, TMF, Spoolcom.
- Experience of IBM mainframe systems would be beneficial.

**We offer:**

- Competitive salary based on demonstrated skills.
- Flexible working hours and location.
- Multicultural and friendly working environment.
- The opportunity to be a key member of our products team.

**Join our team**

If you're a highly motivated team player, keen to share your experience and thrive in a challenging environment, please apply with your CV and covering letter.
