Introduction

This manual describes how to install the BACKBOX software on a NonStop system.

This Installation Guide is organized in two chapters:

1. Introduction - lists the activities for an initial installation on NonStop platform.

The software update is described in separate manuals dedicated to the product update.

2. Detailed Installation Activities - provides the detailed procedure for each installation activity.

BackBox Distribution Package

In the BACKBOX package:

- In the Guardian-DDMMYYYY directory:
 - The Guardian INSE macro
 - The Guardian BBE PAK file
- In the Documentation directory, the following guides:
 - [BACKBOX User Manual](#)
 - [BACKBOX Troubleshooting and Messages Manual](#)

Initial installation

In addition to the BackBox package, the following configuration information is needed:

- BackBox software installation location on the NonStop system(s).
All components including the BackBox domain manager will be installed on a single disk sub-volume on the NonStop system.
A subset of the components will be installed, if applicable, on the peripheral node (only one peripheral node is permitted).
The Peripheral node is installed by the same INSTALL macro.
- Domain manager TCP/IP port and address of the NonStop hosting the domain manager.
- BackBox domain name (can be changed after the initial installation)
- BackBox license key (can be changed after the initial installation)
- Process name and start method for the EMS Extractor.
The start method can be either an OBEY file or a persistent process configured in SCF.

A NonStop user ID in the SUPER group is required.

Use an ID in the SUPER group, but not SUPER.SUPER. This user ID will own all installed files.
Because BBSV and BBEXT will be PROGID by the macro, all non-interactive processes that have not logged-in will run under this user ID.

SUPER.SUPER is not accepted.

This user ID, for example SUPER.BBOX, will:

- Run the install macro INSE500
- Own all installed files.
- Be the default user ID running all BackBox processes.

Processes initiated by the BackBox UI will run with the user ID entered by the user at UI start-up.

For an initial installation follow the scenario:

Step	Description
1. On the HPE NonStop system that will run the Domain Manager: Configure TCP/IP LISTNER for the Domain Manager	Modify the PORTCONF file and restart the LISTENER. In some production environments this might require advanced planning. This may also be done well in advance of the actual BackBox installation. PREP-1: Configure the NonStop TCP/IP LISTNER

Step	Description
<p>2. On the HPE NonStop system that will run the Domain Manager: Install the NonStop BACKBOX software</p>	<p>Upload the BBE500 PAK file and the INSE500 installation macro. Log in this system Run the INSE500 macro with the option A – Install All.</p> <p>INST-1: Install BackBox on the main NonStop system</p>
<p>3. For the other HPE NonStop system that will managed in the same BACKBOX domain: Install the NonStop BackBox software</p>	<p>Log in this peripheral system Run the INSE500 macro on the main system with the option P – Install Peripheral node.</p> <p>INST-2: Install BackBox on a peripheral NonStop system</p>
<p>4. For each HPE NonStop system of the domain: Verify the NonStop to NonStop TCPIP communication</p>	<p>Start and stop the EMS Extractor program on the main and peripheral nodes, Verify its correct starting in EMS.</p> <p>TEST-1: Start and stop the EMS Extractor</p>

Detailed Installation Activities

PREP1: Configure the NonStop TCP/IP LISTNER

The BACKBOX domain manager's program file BBSV is started by the Guardian LISTNER process for each service request. BBSV must be defined in the PORTCONF file.

The LISTNER needs to be configured only on the system that will run the Domain Manager program BBSV.

Choose the installation disk sub-volume (here \$DATA05.BPAK) and TCP/IP port (here 4561).

- a. Update the TCP/IP PORTCONF file using Guardian tools.

Below is an example of a PORTCONF file, where \$DATA05.BPAK.BBSV is the program name and 4561 is the assigned port. Refer to the configuration information table INF-1a for the actual values.

```
ftp          $system.ztcpip.ftpserve
finger      $system.ztcpip.fingerv
7           $system.ztcpip.echoserv
4561       $DATA05.BPAK.BBSV
Phiwsock    $DSMSCM.ZDSMSCM.PDPEXE
```

- b. Restart the Guardian LISTNER process.

INST1: Install BACKBOX on the Main NonStop System

Upload the installation files to a temporary sub-volume on the NonStop.

- PAK file BBE, in binary mode.
- Macro INSE, in ASCII mode.

If the TCP/IP LISTNER has been configured and restarted, the Domain Manager installed by the INSE412 MACRO will be ready to:

- Receive log messages from the VTCs and forward them to the local EMS.
- Reply to requests from the GUI.

The NonStop content of the distribution PAK file is listed in [Appendix – NonStop files in BackBox Package](#)

The INSE macro will:

- Install the BACKBOX software on the system that will host the Domain Manager and the node's specific components, such as the EMS Extractor.
- Detect the NSK hardware type and install the proper objects (code 700 or 800).
- Update the NSK sample configuration and the OBEY files for a first installation.
- If the target sub-volume already contains configuration or data files, INSTALL executes only a software update by replacing executable and macro files. Configuration, data files, and OBEY files will not be updated.

At a NonStop Guardian TACL prompt, enter:

```
>VOLUME <target-subvol>
>RUN INSE
```

```
$DATA15 QCTEST 16>run INSE5TXT
Searching for latest PAK file $*.*.BBE500*
press Break key to stop ...
... found $DATA15.BPAKTMPE.BBE500 (2024-NOV-29 15:57)
... found $DATA15.BPAKTMPE.BBE500A (2024-SEP-18 10:44)

----- Installation of BackBox E5.00 NSK components -----
1. Input PAK file ..... : $DATA15.BPAKTMPE.BBE500 (NOV-29 15:57)
2. Target subvol ..... : $DATA15.QCTEST
3. Install All or Peripheral node: All
4. Initial installation or Update: Initial
5. Spooler location ..... : $S.#BBOX
6. TCPIP process name ..... : $ZTC0
31. EMS Extractor (BBEXT) process : $BBEXT
33. Domain manager TCPIP address. : 127.0.0.1
34. Domain manager TCPIP port.... : 4561

(Number) option to modify, (I) to install, or (Q) to quit :31
```

The macro's menu displays the current values for all options. Enter a number to change the corresponding option until you are satisfied with the displayed values. Then enter the letter "I" to continue installation and extract appropriate files to the target sub-volume. The available options for the INSTALL macro are:

1. Input PAK file: Location of the distribution PAK file.

The macro searches for the latest distribution PAK file on all the local disks. To stop a search executing too long on multiple disks, hit Break key. The file modification time is displayed beside the file name.

If the name of the PAK file to install is not displayed, it can be entered. The file name can be qualified by a remote node name.

2. Target subvol: Installation sub-volume.

Default value is the current sub-volume. It can be a remote sub-volume accessed over Expand.

It must be the same as the location of BBSV as listed in the TCP/IP PORTCONF file

during PREP1: Configure the NonStop TCP/IP LISTNER.

3. Install All or Peripheral node: Type of installation.

"A" (All) to install all programs on the NonStop node that will host the BACKBOX Domain Manager.

"P" (Peripheral node) to install only the node's specific components, such as the EMS Extractor.

Select "A"

4. Initial installation or Update

"I" to execute initial installation, including sample files customization.

"U" to update only programs, distributed TACL macro and EMS filter files.

This value is automatically prompted by the macro if configuration files are present in the target sub-volume.

Select "I"

The INSTALL macro doesn't allow overwriting existing configuration files. To re-execute the Initial installation on a target sub-volume that does not contain valuable data, first delete all files in this sub-volume.

5. Spooler location

Will be used in customizing some of the OBEY files.

6. TCP/IP process name (displayed only if Initial install is specified)

The TCP/IP process name that will allow the EMS Extractor and NonStop TACL OBEY files, such as OBB017, to access the Domain Manager.

By default this option is initialized with the value of the default =TCPIP^PROCESS^NAME, if present in the current TACL environment.

31. EMS Extractor (BBEXT) process

Process name of the EMS Extractor.

33. Domain manager TCP/IP address (displayed only if Initial install is specified)

TCP/IP address for the Domain Manager to be used by the EMS Extractor and by the NonStop TACL OBEY files. Default value is 127.0.0.1.

If the Peripheral NonStop nodes are supposed be managed by the same BACKBOX domain, enter the real IP address of the local NonStop node. This address will be used by Peripheral nodes to connect to the domain manager

34. Domain manager TCP/IP port (displayed only if Initial install is specified)

TCP/IP port for the Domain Manager to be used by the EMS Extractor and by the NonStop TACL OBEY files. Default value is 4561.

Enter the same value as the one in TCP/IP PORTCONF file during PREP1: Configure the NonStop TCP/IP LISTNER.

Execution sample

(Number) option to modify, (I) to install, or (Q) to quit :I

```
$DATA15 QCTEST 16>run INSE5TXT
Searching for latest PAK file $*.*.BBE500*
press Break key to stop ...
... found $DATA15.BPAKTMPE.BBE500 (2024-NOV-29 15:57)
... found $DATA15.BPAKTMPE.BBE500A (2024-SEP-18 10:44)

----- Installation of BackBox E5.00 NSK components -----
1. Input PAK file ..... : $DATA15.BPAKTMPE.BBE500 (NOV-29 15:57)
2. Target subvol ..... : $DATA15.QCTEST
3. Install All or Peripheral node: All
4. Initial installation or Update: Initial
5. Spooler location ..... : $S.#BBOX
6. TCPIP process name ..... : $ZTC0
31. EMS Extractor (BBEXT) process : $BBEXT
33. Domain manager TCPIP address. : 127.0.0.1
34. Domain manager TCPIP port.... : 4561
```

(Number) option to modify, (I) to install, or (Q) to quit :31

EMS Extractor (BBEXT) process name (\$BBEXT) :\$QC500

----- Installation of BackBox E5.00 NSK components -----

1. Input PAK file : \$DATA15.BPAKTMPE.BBE500 (NOV-29 15:57)
2. Target subvol : \$DATA15.QCTEST
3. Install All or Peripheral node: All
4. Initial installation or Update: Initial
5. Spooler location : \$S.#BBOX
6. TCPIP process name : \$ZTC0
31. EMS Extractor (BBEXT) process : \$QC500
33. Domain manager TCPIP address. : 127.0.0.1
34. Domain manager TCPIP port.... : 4561

(Number) option to modify, (I) to install, or (Q) to quit :33

Domain manager TCPIP address (127.0.0.1 to loop back): 192.168.20.63

----- Installation of BackBox E5.00 NSK components -----

1. Input PAK file : \$DATA15.BPAKTMPE.BBE500 (NOV-29 15:57)
2. Target subvol : \$DATA15.QCTEST
3. Install All or Peripheral node: All
4. Initial installation or Update: Initial
5. Spooler location : \$S.#BBOX
6. TCPIP process name : \$ZTC0
31. EMS Extractor (BBEXT) process : \$QC500
33. Domain manager TCPIP address. : 192.168.20.63
34. Domain manager TCPIP port.... : 4561

(Number) option to modify, (I) to install, or (Q) to quit :34

Domain manager TCPIP process port : 4592

----- Installation of BackBox E5.00 NSK components -----

1. Input PAK file : \$DATA15.BPAKTMPE.BBE500 (NOV-29 15:57)
2. Target subvol : \$DATA15.QCTEST
3. Install All or Peripheral node: All
4. Initial installation or Update: Initial
5. Spooler location : \$S.#BBOX
6. TCPIP process name : \$ZTC0
31. EMS Extractor (BBEXT) process : \$QC500
33. Domain manager TCPIP address. : 192.168.20.63
34. Domain manager TCPIP port.... : 4592

INST2: Install BACKBOX on a Peripheral NonStop System

Since version 4.09 each peripheral node is controlled and managed by its own peripheral node license. Licenses are available upon request. Contact [ETI-NET Support](#) for peripheral node license request. The license file received has to be uploaded on the NonStop in binary mode. See license file content \ETINIUM.\$DATA05.BPAK.BBEXTLIC in the sample below.

A peripheral system can be installed only after the Domain manager has been installed on the main system.
 Login to the peripheral node with an account registered in SUPER group.
 Run the INSE macro to install the BACKBOX software. Only the node's specific components, such as the EMS Extractor, will be installed.

At a NonStop Guardian TACL prompt (SUPER group), enter:

```
>VOLUME <target-subvol>
>RUN \main-node.$vol.subvol.INSE
----- Installation of BackBox E5.00 NSK components -----
```

```
Domain subvol \node.$vol.subvol () :\insidx.$etinet.qae500
 1. Input PAK file ..... : $DATA15.BPAKTMPE.BBE500      (NOV-29 15:57)

TEST: Start and Stop the EMS Extractor

EMS Extractor must run in all NonStop systems that will have tape devices configured in the domain. The EMS Extractor can be started by a simple OBEY file (provided OEXT), which is convenient for initial testing. It can also be defined as a persistent process to the NonStop Kernel (sample SCF commands are provided in file SCFIN1.)

For production use, it is recommended that the Extractor be configured as a persistent process so that it will be automatically restarted in the event of any NonStop system restart. This will avoid the possibility of tape mounts going un-serviced because the Extractor is not running.

The INSTALL macro previously executed performed minimal EMS Extractor configuration. More configurations are possible, see the [User Manual > Configuration](#) section.

If the Extractor is to be started using the OEXT OBEY file, check and customize its process name before running it:

```
TEDIT OEXT
OBEY OEXT
```

If the Extractor is to be started using SCF:

- The NSK Kernel will start the EMS Extractor automatically at machine load or at process ABEND.
- Customize the provided SCFIN1 file before using it. The Extractor process must be initially manually started by SCF.
For example:

```
TEDIT SCFIN1
SCF
1-> OBEY SCFIN1
2-> START PROCESS ZZKRN.#BBOXEXT
```

After starting the Extractor, check in EMS for the message on the local node:

I3517 EMS Extractor started for Domain <domain-id>(BBEXT BackBox-version)

Then stop it. The EMS Extractors will be restarted after the implementation of tape drives before the first test of a tape application.

For example:

```
STOP $BBOXEXT
SCF ABORT PROCESS ZZKRN.#BBOXEXT
```

Check also the EMS console for tape events started in the system that hosts the domain manager.

If BBEXT abends at startup with the EMS message "F1001- Error 70 from second FILE_OPEN_on EMSDIST", see "\$BBEXT EMS Extractor abend at startup" in the [BACKBOX Troubleshooting and Messages Manual](#)
